App title : ***CampusConnect***

CampusConnect is a platform designed to make student life easier by bringing together information, resources, skills, and student-to-student help in one place.

The main idea is simple: when a student needs something, the app helps them find it within their campus community.

For example, a student can:

-Find information about administrative procedures, campus facilities, transportation, events, study places, and academic resources.

-Post an “I NEED” request if they need something, such as a calculator, charger, book, ride, or help with an exercise.

-Post an “I HAVE” offer if they have something they can lend, sell, give away, or help with.

- Exchange skills by offering skills they can teach and finding students who can teach them something they want to learn.

- Connect with other students through matching, messaging, and scheduling.

- Build trust through ratings and reviews after exchanges or sessions.

The application can start with one university, where students have access to information specific to their campus, and later expand to multiple universities.

Conclusion :

CampusConnect connects students with the information, things, skills, and people they need — making university life easier through their own campus community.
